

Enabling works progress update

Enabling works contractors Barpa, are on the home stretch, with works progressing well on site.

The NSW Government has committed \$750 million to the redevelopment of Royal Prince Alfred (RPA) Hospital to deliver a new hospital building and refurbishment of existing spaces.

This is the most significant investment in RPA's 140-year history to support the world-leading services provided at RPA for the 740,000 people who live in Sydney Local Health District and the more than 1 million people who come into the District each day to work, study and visit.

When complete, the RPA Redevelopment will deliver:

Expanded and enhanced Emergency Department and Intensive Care Units

Increased interventional and imaging services

State-of-the-art operating theatres

Expanded neonatal intensive care services

Expanded and improved adult inpatient ward accommodation

Improved public domain and services including roads, wayfinding, landscaping and information and communications technology infrastructure

Enabling works

Enabling works commenced in late 2022, with Indigenous construction company Barpa appointed the enabling works contractor for the \$750 million Royal Prince Alfred Hospital redevelopment. A majority Indigenous-owned company, Barpa prides itself on respectful Indigenous engagement and strives to make a positive difference for Aboriginal People.

An exciting milestone for the project, the beginning of enabling works was celebrated with a traditional smoking ceremony led by Aboriginal Elders and knowledge holders on Gadigal Country.

Enabling works will help prepare the construction site for main works, and focuses on traffic and vehicle access, vegetation removal and the refurbishment of a new space for Anatomical Pathology.

It has been a busy time for Barpa, building and reconfiguring the Gloucester House Drive forecourt. In addition to these works, the link bridge connecting the main hospital to Gloucester House has been adjusted to enhance access to the campus for large vehicles.

Lambie Dew Drive will also receive a new turning bay, improving access for deliveries to RPA's loading dock, helping minimise impact during construction.

It's not all traffic changes though, with Anatomical Pathology soon to relocate to their new space. Building 12

is currently receiving the finishing touches required prior to Anatomical Pathology moving into their new and expanded space planned for late 2023.

With enabling works on track to be completed by mid-2023, and the Anatomical Pathology move planned for late 2023, we look forward to keeping you updated on all things construction as we head towards main works.

“The team and I have enjoyed working on such a significant project for the community, helping prepare the site for main works construction to begin”

- David Somerville, Senior Project Manager

GLOUCESTER HOUSE FORECOURT
